ADEGBOYEGA PRECIOUS

AI Automation Specialist | Automation Solutions Architect | Mechatronics Engineer
Lagos, Nigeria (GMT+1) | Open to Global Remote (B2B Contract / EOR via Deel or Remote.com)
adeprecious62@gmail.com

PROFESSIONAL SUMMARY

Automation-focused engineer specializing in enterprise RPA, Agentic Process Automation (APA), and AI-enabled process orchestration. Proven track record designing greenfield automation architectures, state-persistent bot frameworks, and layout-agnostic document ingestion engines utilizing LangGraph, LangChain, and LLMs. Expert at tuning containerized infrastructures, integrating ERPs (SAP GUI, SuccessFactors), and orchestrating cloud REST/Graph API pipelines across systems managing $65,000+ USD equivalent (₦100M+) in monthly enterprise transactions with a consistent 99% bot uptime.

TECHNICAL SKILLS SUMMARY

- **RPA & Workflow Platforms:** Automation Anywhere (A360 Enterprise), Self-Hosted n8n (Docker), Power Platform, UiPath.
- **AI & Agentic Frameworks:** LangGraph, LangChain, Pydantic (Schema Enforcement), Prompt Engineering, Google Gemini API, TensorFlow.
- **Enterprise ERP & Cloud Integrations:** SAP GUI (ME32K), SAP SuccessFactors, Microsoft Graph API (REST Endpoints), Microsoft SharePoint, Updapt ESG Portal, Oracle SQL, Microsoft Active Accessibility (MSAA), Outlook/Mail Server (IMAP/M365).
- **Programming & Scripting:** Python (Pandas, Openpyxl, Core Integration), JavaScript (ES6+ / Node.js Runtime), Google Apps Script.
- **Databases & Infrastructure:** Docker (Compose), PostgreSQL, Redis, Webhooks (Ngrok), JSON, In-memory Data Tables.
- **Process Architecture & Reliability:** Look-Before-You-Leap (LBYL) State Caching, Dispatcher-Performer Pattern, Human-in-the-Loop (HITL), Idempotent Design, Resiliency Checkpointing, Fail-Loud Validation Guardrails, Try/Catch/Finally Lifecycle Teardowns.
- **Engineering Tools:** MATLAB, AutoCAD, SolidWorks, Microsoft Project.

PROFESSIONAL EXPERIENCE

RPA Developer (functioning in an Automation Solutions Architect capacity)

Tolaram Group | Lagos, Nigeria *January 2026 – Present*

- **HR Document Orchestration (SuccessFactors & Graph API):** Scaled a cloud document routing pipeline to process 3,000+ employee loan requests for the Dufil operating entity; reduced cycle times from 2+ manual minutes to 60–90 seconds per transaction by leveraging Microsoft Graph API / REST endpoints for programmatic SharePoint file retrieval, automated SuccessFactors attachment uploads, and dynamic routing to “Completed” vs. “Exception” directories.
- **Fail-Loud Guardrails & Regex Isolation:** Integrated “Fail-Loud” validation rules and regex boundary mapping ((^|[^0-9])) to isolate Employee IDs and dynamic Loan Types, preventing cross-attachment collisions across multi-loan batches with 100% audit integrity.
- **SAP ME32K Transaction Architecture (QAS Staging):** Engineered a decoupled Dispatcher-Performer framework in A360 validated on SAP Quality Assurance (QAS) environments for ME32K outline agreement updates, utilizing row-indexed LBYL state persistence to ensure zero data duplication during failure states.
- **Autonomous Payroll & Statutory Compliance Engine:** Developed an end-to-end Python processing wrapper (openpyxl, regex) across 100+ contract and permanent staff, autonomously generating 6 statutory compliance schedules (ITF, NSITF, PAYE, Pension) and reducing reconciliation time from 4 hours to seconds per cycle.
- **ESG Reporting Automation Pipeline:** Architected an enterprise ESG reporting automation pipeline using Automation Anywhere A360, connecting Updapt to SharePoint via Microsoft Graph API, reclaiming hundreds of monthly hours for the Sustainability team and driving efficiency across corporate reporting.
- **Scalable Business Unit Reporting Bot:** Engineered a highly scalable reporting bot that dynamically processes data for 32 distinct facilities, slashing a 48-hour manual workload down to 96 minutes total (3 minutes per unit) — a 96.6% increase in processing efficiency — with the bot automatically scaling bandwidth to accommodate new business units as they're onboarded.
- **Custom Report Extraction Optimization:** Optimized custom report extraction workflows by leveraging deep DOM manipulation and background JavaScript execution, reducing manual execution time from 4 hours to 8 minutes 54 seconds — a 96.2% efficiency gain.
- **Master Retry Framework:** Designed a resilient Master Retry Framework featuring advanced session-state verification and dynamic Excel loop-breaking, ensuring zero-maintenance scalability as new enterprise locations are continually onboarded.
- **AI Ingestion & Core APA:** Designed and deployed an end-to-end intelligent document extraction framework using LangGraph, LangChain, and Google Gemini API; implemented schema-enforced Pydantic modeling to parse unstructured vendor invoices, bypassing rigid template locks and eliminating thousands in annual licensing fees.

- **Scale & Financial Impact:** Optimized the Globus corporate banking batch system to securely process $65,000+ USD equivalent (₦100M+) in monthly enterprise transactions; engineered a custom coordinate-mapping solution using the A360 Mouse package to bypass portal UI restrictions, cutting manual processing from 2 hours to 5 minutes.
- **Multi-Bank Liquidity Orchestration:** Automated Naira and Dollar account balance and statement extraction across 15+ commercial banks underlying multiple operating entities (MCPL, KTNL, Guinness), consolidating financial data for stakeholder reporting and eliminating manual daily reconciliation across business units.
- **Technical Quality Assurance & Code Reviews:** Appointed to lead peer code reviews and mentor team members; refactored legacy nested-loop architectures by replacing row-by-row queries with in-memory database pulls to minimize latency.

Project Manager (Business Development & Community Growth Specialist)
Bincom Development Center | Lagos, Nigeria *April 2024 – April 2025*

- Led cross-functional community expansion initiatives that achieved a 373% growth milestone while earning formal certifications in Business Analysis and Project Management.
- Performed root cause analysis to isolate operational friction points, introducing data-driven solutions that improved workflow effectiveness by 25%.

Independent Automation Developer / Mechatronics Research
Parallel to B.Eng. Degree *2021 – 2024*

- **Intelligent Stock Market Forecasting:** Developed a hybrid prediction system combining neural networks and fuzzy logic; built the Python execution pipeline using NumPy, scikit-fuzzy, and TensorFlow with a real-time visualization interface.
- **Sensor Fusion AgRobot:** Engineered an AI-controlled sensor fusion automation robot for precision farming; integrated microcontroller networks to analyze soil/environmental data matrices for automated irrigation.
- **Data Scripting Pipelines:** Developed standalone Python data engineering scripts and web scraping pipelines using pandas and openpyxl to automate heavy administrative and financial data consolidation workflows.
- **Embedded Systems Automation:** Programmed industrial hardware process automation logic using MATLAB and core Python architectures, mastering low-level runtime execution boundaries and hardware-software handshaking.

KEY AUTOMATION PROJECTS

- **Automated Lead Intake & Scoring Engine (2026):** Deployed an input-agnostic ingestion microservice via n8n and JavaScript that unifies structured Google Form webhooks with unstructured conversational text inputs; dynamically scores opportunity viability out of 100 before executing cloud database mutations.
- **Automated Financial Surveillance Engine:** Architected a low-latency data extraction pipeline scheduled to monitor market equity streams; programmed real-time mathematical variance models on nested time-series payloads to dispatch dynamic alerts via the Telegram API when volatility thresholds are breached.
- **Transactional Resilience Engine (First Bank):** Hardened the UI layer of a high-volume financial transaction bot by replacing fragile ID-based selectors with semantic XPaths and MSAA integration, increasing execution speed by ~30%.
- **Smart Email Triage & Support Router (Personal Project; n8n, Docker):** Built a self-hosted n8n (Docker) pipeline that classifies inbound emails (sales, bug, billing, general) with structured Gemini outputs and a Groq fallback model; regex guards drop no-reply mail before the LLM call. Branches log to Google Sheets, create threaded Gmail drafts and send Telegram alerts for urgent bugs, with deterministic tie-breaking between payment and system failures.
- **Agentic n8n Workflows (Personal Projects):** Built a Telegram ReAct assistant (Gemini and Groq models; Calendar, Gmail, market-data and weather tools) and a B2B partnership qualification engine in which a Gemini agent returns a structured verdict (status, 0–100 score, reasoning), triggers the matching Gmail reply and logs to a Google Sheets audit trail.
- **Queue-Mode n8n Infrastructure (Personal Project; Docker Compose):** Self-hosted n8n with PostgreSQL 17 and a password-protected, AOF-persistent Redis queue feeding three workers separate from the main instance; added database and cache healthchecks, an isolated Docker network and .env-managed secrets, and migrated 16 workflows with credentials to PostgreSQL.

EDUCATION & CERTIFICATIONS

- Bachelor of Engineering (B.Eng.) in Mechatronics Engineering | Bells University of Technology (Second Class Upper Division)
- Automation Anywhere Certified Advanced RPA Professional | Automation Anywhere University
- Automation Anywhere AI Automation Engineering Certification (In-View) | Automation Anywhere University
- Python Programming Certification | Coursera
- Business Analysis & Project Management Certifications | Bincom Development Center
- HSE Level 1, 2, and 3 | World Safety Organization (WSO)
